BIOGRAPHY

Don Heim joined VERTEX in July 2011 and served as Vice President in the IHBS division until October 2019. Mr. Heim currently serves as Vice President in the National Programs Group. Mr. Heim has extensive experience in the environmental industry including: coordination and performance of Environmental Audits, Hazardous Materials Building Inspections, Indoor Air Quality Studies and Asbestos Air Monitoring.

He has a working knowledge of environmental regulations and a specialty in asbestos throughout all U.S. jurisdictions. Mr. Heim has successfully coordinated, managed and/or performed environmental consulting services associated with “turn-key” projects in the renovation of high-rise office buildings, financial institutions, health care facilities, universities, industrial sites and retail shopping centers. At VERTEX, Mr. Heim’s responsibilities have been expanded to include not only the performance of similar services listed above but also to manage VERTEX’s Mid-Atlantic (Philadelphia) based operation, provide corporate support and support all VERTEX locations throughout the United States as part of the National Programs Group.

Additionally, Mr. Heim has provided environmental consulting and oversight as a “turn-key” service to our clients, such as: the environmental management of remediation and demolition for a 300,000-square-foot school in Philadelphia, Pennsylvania; the environmental management associated with the transformation of a mixed-use retail site in New York, New York; the environmental audits of retail portfolio purchases in New York, New Jersey, Pennsylvania and Alabama; indoor air quality assessments and mold remediation in retail sites throughout the U.S.; environmental oversight and management in the transformation of a manufacturing building to an apartment complex in downtown Philadelphia, Pennsylvania; and multiple projects in which he coordinated all pre-project inspection, project environmental remediation and testing during demolition/decommission activities. Mr. Heim’s experience in environmental consulting, demolition and construction has proven valuable to our clients when cost estimating is required under tight due diligence and development deadlines.
